Diving First Aid for Professional Divers Chapter Review Questions v2.1

1. Duty of care is an obligation to provide assistance regardless of training.
   a. True  b. False

2. To avoid legal problems,
   a. always ask an injured person for permission to assist
   b. always ask the parent/guardian of a minor for permission to assist their child
   c. obtain written permission to provide care
   d. all of the above
   e. a and b only

3. Anxiety is a normal response in an emergency.
   a. True  b. False

4. If a rescuer experiences emotional distress, relief may be achieved by
   a. a critical-incident debriefing
   b. professional counseling
   c. both a and b

Diving First Aid for Professional Divers Chapter 2 Review Questions

1. Hypoxia is a condition of low oxygen supply.
   a. True  b. False

2. An absence of oxygen
   a. may cause cell death
   b. is known as anoxia
   c. may cause unconsciousness
   d. all of the above

3. Gas exchange takes place at the
   a. spinal column interfaces
   b. long bone joints
   c. alveolar-capillary membrane
   d. muscle-nerve junctions

4. The respiratory system does not include which of the following:
   a. nose
   b. mouth
   c. trachea
   d. heart

Diving First Aid for Professional Divers Chapter 3:1 Review Questions

1. The nervous system consists of the
   a. brain, spinal cord and nerves
   b. vertebrae and skull
   c. heart, lungs and brain
   d. head, torso and limbs

2. Neural pathways may be interrupted by
   a. stroke
   b. decompression illness
   c. trauma
   d. all of the above

Diving First Aid for Professional Divers Chapter 3:2 Review Questions

1. Oxygen is a clear, odorless gas essential to life.
   a. True  b. False

2. The atmospheric air we inhale contains _____ percent oxygen.
   a. 12
   b. 16
   c. 21
   d. 27

3. The air we exhale contains about ______ % oxygen.
   a. 12
   b. 16
   c. 21
   d. 27

4. Oxygen is carried throughout the body by
   a. white blood cells
   b. red blood cells
   c. bone marrow
   d. blood plasma

5. Carbon dioxide is
   a. a waste product of metabolism
   b. a toxic gas
   c. essential for life
   d. an inert gas
6. Nitrogen comprises ____ percent of atmospheric air.
   a. 21
   b. 27
   c. 67
   d. 78

7. Carbon monoxide is
   a. a waste product of metabolism
   b. a toxic gas
   c. essential for life
   d. an inert gas

8. AGE symptoms
   a. occur within 15 minutes of the time of injury
   b. typically occur within six hours of
   c. surfacing
   d. may be delayed up to 24 hours
   e. both b and c

9. Returning to diving following DCI should be done in conjunction with a physician knowledgeable in dive medicine.
   a. True    b. False
Diving First Aid for Professional Divers
Chapter 7 Review Questions

1. Essential equipment to have available at every dive site includes
   a. oxygen unit
   b. first-aid kit
   c. emergency action plan
   d. all of the above

2. Emergency action plans should include
   a. local resources and emergency phone numbers
   b. communication equipment
   c. method of documenting information about injured divers and first aid provided
   d. location of the nearest hyperbaric chamber
   e. a, b and c only

3. Hyperbaric chambers will always be available to treat injured divers.
   a. True  b. False

Diving First Aid for Professional Divers
Chapter 8 Review Questions

1. Moving someone should be limited to times of emergency or when the current location places the victim at risk of further injury.
   a. True  b. False

2. The rescuer should consider which of the following body mechanics when lifting?
   a. keep back straight
   b. bend only from hips
   c. keep head neutral
   d. lift with legs
   e. all of the above

Diving First Aid for Professional Divers
Chapter 9 Review Questions

1. Potential hazards that should prompt caution when approaching the scene of an accident include
   a. fire and animals
   b. expired first-aid certifications
   c. electricity, gas and traffic
   d. a and c

2. The S-A-F-E mnemonic helps us remember
   a. to activate EMS
   b. scene safety assessment
   c. to use personal protective equipment
   d. b and c
   e. none of the above

3. Personal protective equipment is a critical part of keeping yourself safe while providing care.
   a. True  b. False

4. Protective equipment includes
   a. nonlatex gloves
   b. eye shields
   c. resuscitation masks
   d. all of the above

5. When removing gloves after providing first aid, it is important to keep the outer surface of the glove from touching your skin.
   a. True  b. False

Diving First Aid for Professional Divers
Chapter 10 Review Questions

1. Initial assessment includes:
   a. assessing for responsiveness and activating EMS
   b. adjusting the patient's position for care
   c. initiating CPR
   d. all of the above
   e. a and c only
   f. b and c only

2. To check for a pulse on an adult or child, use gentle finger pressure on the
   a. carotid artery
   b. brachial artery
   c. femoral artery
   d. radial artery

3. To check for a pulse on an infant, use gentle finger pressure on the
   a. carotid artery
   b. brachial artery
   c. femoral artery
   d. radial artery

4. Any breath sounds at all are considered normal.
   a. True  b. False

5. Placing an unconscious, breathing victim in the recovery position is important to maintain an open airway and to minimize the potential of blood and vomit to cause obstruction.
   a. True  b. False

6. Persons with neck, spine or pelvic injuries should not be placed in the recovery position.
   a. True  b. False
7. A breathing, responsive injured diver should be placed in a position of comfort or the recovery position.
   a. True     b. False

---

Diving First Aid for Professional Divers
Chapter 11 Review Questions

1. Prompt medical intervention may reduce the possibility of permanent disability.
   a. True     b. False
2. F-A-S-T stands for
   a. facts, attitude, sensitivity, talent
   b. facial droop, arms, speech, time
   c. feet, arms, spine, toes
   d. face, ankles, stability, touch

---

Diving First Aid for Professional Divers
Chapter 12 Review Questions

1. An emergency action plan should be activated
   a. as soon as you suspect a neurological injury
   b. after conducting a complete neurological assessment
   c. only if the injured diver does not respond to oxygen first aid
2. S-A-M-P-L-E is a mnemonic to assist with
   a. obtaining information about an injured diver
   b. remembering to get a dive profile sample
   c. calculation assessment in mental function
   d. obtaining insurance and compensation

---

Diving First Aid for Professional Divers
Chapter 13 Review Questions

1. Which of the following is not one of the areas evaluated during a neurological assessment?
   a. mental function and cranial nerves
   b. range of motion
   c. motor function
   d. coordination and balance
2. Mental function evaluates
   a. orientation to person, place, time and event
   b. memory and speech
   c. comprehension and computational skills
   d. all of the above

---

Diving First Aid for Professional Divers
Chapter 14 Review Questions

1. The primary goal of delivering the highest concentration of oxygen possible to an injured diver is to facilitate inert gas washout and improve oxygen delivery to compromised tissues.
   a. True     b. False
2. Providing a high concentration of oxygen to an injured diver may provide these benefits:
   a. accelerate inert gas elimination
   b. reduce bubble size
   c. enhance oxygen delivery to tissues
   d. reduce swelling
   e. all of the above
3. Symptoms of nonfatal drowning may include
   a. difficulty breathing
   b. abdominal distension
   c. chest pain
   d. hyperthermia
   e. all but d
4. As a first responder to a nonfatal drowning, your role is to
   a. monitor vital signs
   b. provide supplemental oxygen
   c. transport to the nearest medical facility
   d. all of the above
5. The percentage of oxygen delivered when using a demand valve is influenced by
   a. flow rate
   b. mask fit
   g. mask seal
   h. both b and c
6. In remote areas, the priority in oxygen delivery is
   a. to conserve oxygen supplies
   b. to maximize the highest inspired fraction of oxygen
   c. limit the flow of oxygen
7. Oxygen toxicity, whether CNS or pulmonary, is not a concern for oxygen first aid to an injured diver.
   a. True   b. False

Diving First Aid for Professional Divers
Chapter 15 Review Questions

1. Oxygen is one element of the fire triangle.
   a. True   b. False

2. The risks of handling oxygen can be reduced by
   a. keeping the oxygen units free of hydrocarbons found in oils and lubricants that are often found on dive boats
   b. opening the oxygen cylinder slowly
   c. keeping the unit away from the heat of the sun
   d. all of the above

3. Safety precautions to implement when using oxygen cylinders include
   a. not allowing any oil or grease to come in contact with oxygen cylinder
   b. not exposing oxygen cylinders to high temperatures or allow smoking/open flames around oxygen
   c. providing adequate ventilation when using oxygen
   d. using only equipment made for use with oxygen
   e. all of the above

4. With what grade of oxygen should an oxygen cylinder for diving first aid be filled?
   a. aviator or industrial grade
   b. medical grade only
   c. medical or industrial grade
   d. aviator or medical grade

5. Methods for obtaining oxygen fills may include
   a. prescription
   b. documentation of training in oxygen delivery
   c. prospective prescription
   d. any of the above

6. When should an oxygen unit’s components and cylinder pressure be checked?
   a. every two years
   b. before every outing
   c. every week
   d. annually

7. An oxygen unit should be stored
   a. with the valve closed
   b. in its protective case
   c. assembled
   d. all of the above

8. It is not necessary to clean oxygen parts and masks.
   a. True   b. False

Diving First Aid for Professional Divers
Chapter 16 Review Questions

1. Oxygen delivery systems are comprised of which of the following?
   a. first-aid kits and barriers
   b. oxygen cylinders and pressure-reducing regulator
   c. oxygen hose and face mask
   d. b and c

2. Two considerations when choosing an oxygen cylinder are distance to emergency care and size (volume) of the cylinder.
   a. True   b. False

3. A multifunction regulator is preferred in emergency oxygen for scuba diving injuries because it can provide emergency oxygen to two injured divers at the same time.
   a. True   b. False

4. An oxygen cylinder should be switched during care when the pressure drops below 200 psi if another cylinder is available; if another cylinder is not available, use the cylinder until it is empty.
   a. True   b. False

5. Oxygen cylinders are subject to periodic hydrostatic testing.
   a. True   b. False

6. Oxygen-cylinder marking colors are standardized throughout the world to avoid confusion.
   a. True   b. False

7. Oxygen regulators are fitted with a pin indexing system to prevent use on other cylinder valves that may not contain oxygen.
   a. True   b. False

8. A demand valve flows only when the injured diver inhales, allowing the oxygen to last longer.
   a. True   b. False

9. The initial flow rate for constant-flow oxygen delivery is
   a. 2-4 lpm
   b. 10-15 lpm
   c. 20-25 lpm
   d. the rate the injured diver will tolerate

10. A constant-flow mask that is recommended when a breathing injured diver cannot activate the demand inhalator valve or when there is more than one injured diver is a
    a. nonrebreather mask
    b. oronasal resuscitation mask
    c. bag valve mask
Diving First Aid for Professional Divers
Chapter 17 Review Questions

1. The goal of CPR (without defibrillation) is to maintain the adequate circulation of oxygenated blood to vital organs such as the
   a. spleen and pancreas
   b. stomach and kidney
   c. heart and brain
   d. liver and muscles

2. Exhaled air contains about 10% oxygen.
   a. True  b. False

3. During CPR, the functions of the heart and lungs are temporarily taken over by
   a. chest compressions and ventilations
   b. cardiac defibrillation and an oxygen bottle
   c. advanced medications and ventilator machines

4. What CPR protocol should be used when responding to a victim of drowning?
   a. A-B-C
   b. B-A-C
   c. C-A-B
   d. C-B-A

5. In most cases, the heart restarts after someone performs CPR.
   a. True  b. False

6. The five links in the chain of survival in correct order are:
   a. 911, CPR, AED, advanced cardiac life support, post-cardiac-arrest care
   b. CPR, 911, AED, advanced cardiac life support, post-cardiac-arrest care
   c. AED, advanced cardiac life support, post-cardiac-arrest care, 911, CPR
   d. post-cardiac-arrest care, advanced cardiac life support, 911, CPR, AED

7. In the case of children and drowning victims, once unresponsiveness has been established, the single rescuer should
   a. check for injuries
   b. check the mouth for foreign bodies
   c. activate EMS
   d. perform CPR for two minutes and then call EMS

8. When calling EMS, you should tell them
   a. what happened and the condition of the injured person
   b. the location of the emergency and a callback number
   c. how many persons are involved
   d. your name and the first aid provided
   e. all of the above

Diving First Aid for Professional Divers
Chapter 18 Review Questions

1. The recommended rate of compression for CPR on all ages is
   a. 60-80 per minute
   b. 100-120 per minute
   c. at least 140 per minute
   d. rate is not important as long as compressions are being done

2. The recommended depth of chest compressions for an adult is
   a. 1½ – 2 inches
   b. 2–2½ inches
   c. 3–3½ inches
   d. Depth is not important as long as compressions are being done.

3. The recommended depth of chest compressions for infants and children is
   a. one-third of chest depth
   b. 2 inches (5 cm)
   c. 1 inch (2.5 cm)

4. The compression-to-ventilation ratio for two-person CPR on children and infants is
   a. 30:2
   b. 30:3
   c. 15:2
   d. 15:1

Diving First Aid for Professional Divers
Chapter 19 Review Questions

1. Each rescue breath should last about
   a. 2 seconds
   b. 1 second
   c. 5 seconds

2. To avoid overexpansion of their lungs, the volume of ventilations for children should be adjusted to accommodate their size.
   a. True  b. False

3. When delivering rescue breaths to an infant, the head should
   a. be extended as it would for an adult or child
   b. not be extended at all
   c. be extended gently but not as far as you would for an adult or child

4. When delivering only rescue breaths (no compressions) on an adult, the rate of ventilations is one breath every
   a. 10 seconds
   b. 5-6 seconds
   c. 3 seconds
5. Rescue breaths only (no compressions) on an infant should be delivered every 3-5 seconds.  
   a. True  b. False

6. Full CPR is always recommended for  
   a. drowning victims  
   b. scuba diving injuries  
   c. both a and b

7. A bag valve mask  
   a. is a self-inflating bag with a mask that aids in rescue breathing  
   b. has a manual trigger that initiates oxygen flow  
   c. is best used by two rescuers working together  
   d. a and c

8. Manually triggered ventilators  
   a. allow rescuers to deliver high concentrations of oxygen to nonbreathing or inadequately breathing divers  
   b. can also function as a demand valve  
   c. is best used by two rescuers  
   d. all of the above
9. What must you do when a victim regurgitates?
a. Roll the patient on his side, and wipe or suction out the mouth.
b. Blow vomit back into the stomach.
c. Remove gloves, and wipe away vomit with bare hands.

10. Suctioning for adults, children and infants respectively should limited to
a. 15 seconds, 10 seconds, 5 seconds
b. 2 minutes, 1 minute, 30 seconds
c. 20 seconds, 10 seconds, 5 seconds
d. 30 seconds, 15 seconds, 10 seconds

Plain water is the preferred first-aid measure for exertional dehydration.
a. True  b. False

Someone who appears to have suffered a concussion can resume his regular activities regardless of how he may feel.
a. True  b. False

An avulsed tooth can be stored in
a. egg white
b. whole milk
c. the injured person’s saliva
d. all of the above

Diving First Aid for Professional Divers
Chapter 22 Review Questions

1. A general patient assessment includes assessing
a. overall impression of the patient's health and well-being
b. respiratory effort
c. presentation of skin color
d. all of the above

2. Asthma
a. is a noncontagious respiratory illness
b. is airway narrowing that makes breathing difficult
c. can be treated by metered dose inhalers
d. can be life-threatening if severe and prolonged
e. all of the above

3. All heart attacks are painful.
a. True  b. False

4. Hypoglycemia is a condition
a. in which blood sugars are low
b. that should be treated with additional insulin
c. that can be reversed by eating and/or drinking foods with high sugar content
d. both a and c

5. F-A-S-T stands for Face, Arms, Smile, Time.
a. True  b. False

6. During a seizure, the rescuer’s primary concern is to move objects that may cause injury if the patient should hit them.
a. True  b. False

7. In the event of suspected poisoning,
a. determine what was ingested
b. determine how much was taken
c. note current symptoms
d. call the local poison control center or EMS
e. all of the above

Diving First Aid for Professional Divers
Chapter 23 Review Questions

1. The first step in rewarming is to prevent further heat loss.
a. True  b. False

2. Management of hypothermia may include
a. removal from the cold
b. removal of wet clothing
c. use of blankets and heat packs
d. calling EMS
e. all of the above

3. Heat stroke is a medical emergency that requires aggressive cooling and activation of EMS.
a. True  b. False

Diving First Aid for Professional Divers
Chapter 24 Review Questions

1. Slips and falls can be prevented by
a. keeping walkways as dry as possible
b. providing drainage, rubber matting or rough surface concrete
c. using wet-surface warning signs
d. all of the above

2. The purpose of a secondary assessment is to identify injuries that may not be readily apparent.
a. True  b. False

3. General guidelines that should be used when conducting a secondary assessment include
a. S-A-F-E, standard precautions, asking permission to help
b. keeping the injured diver in the position found, realigning any limb deformity as quickly as possible
c. disregarding any complaints of pain due to the fall
d. calling EMS immediately
e. a and d only
4. A splint is used to
   a. immobilize the joints on either end of an injured limb
   b. ease pain
   c. protect the limb from further injury
   d. all of the above
   e. a and c

Diving First Aid for Professional Divers
Chapter 25 Review Questions

1. The three general categories of marine life injuries include
   a. envenomations
   b. traumatic injuries
   c. seafood poisoning
   d. all of the above

2. Envenomation is a process facilitated by bites, punctures or stings.
   a. True    b. False

3. Marine animal bites are usually fatal.
   a. True    b. False

4. Seafood poisoning occurs as a result of contaminated food or liquids.
   a. True    b. False

5. Standard precautions include the use of
   a. nonlatex medical-style gloves
   b. surgical-style masks
   c. protective eyewear
   d. all of the above

Diving First Aid for Professional Divers
Chapter 26 Review Questions

1. What are the four steps in first aid for jellyfish stings in the correct order?
   a. inactivate, remove tentacles, wash area, treat symptoms
   b. remove tentacles, wash area, treat symptoms, inactivate
   c. treat symptoms, wash area, remove tentacles, inactivate

2. Pressure immobilization is recommended for which invertebrate marine life injuries?
   a. jellyfish stings
   b. cone-snail barb punctures
   c. blue-ringed octopus bites
   d. b and c

3. First aid for contact injuries includes
   a. controlling bleeding
   b. washing area thoroughly
   c. removing any foreign material
   d. leaving blisters intact
   e. all of the above

Diving First Aid for Professional Divers
Chapter 26.1 Review Questions

1. Envenomations may occur by
   a. stings
   b. spines
   c. bites
   d. barbs
   e. all of the above

2. Envenomations may occur due to
   a. accidental contact
   b. defensive action
   c. both a and b

3. The health status of the injured person, sensitivity to the venom and delays in receiving first aid have an impact on the victim’s response to the injury.
   a. True    b. False

Diving First Aid for Professional Divers
Chapter 27 Review Questions

1. Marine animals bite when
   a. they feel threatened
   b. humans are mistaken for food
   c. humans engage in spearfishing or feeding
   d. all of the above

2. Infection is of particular concern with marine animal bites.
   a. True    b. False

3. Which of the following is the first line of action to control external bleeding?
   a. direct pressure
   b. tourniquets
   c. hemostatic dressings
4. A tourniquet should be placed
   a. if the wound exhibits massive arterial bleeding
   b. if bleeding is not stopped by direct pressure over the wound
   c. 1-2 inches above the wound
   d. all of the above

5. A tourniquet should be removed after two hours regardless of continued bleeding.
   a. True    b. False

6. Signs and symptoms of infection are
   a. pus, redness, sweating, hyperthermia
   b. prickly feeling, rash, increased thirst, sweating, heat
   c. pain, redness, loss of function, swelling, heat

---

**Diving First Aid for Professional Divers**

Chapter 28 Review Questions

1. Contaminated seafood may taste and smell normal.
   a. True    b. False

2. Seafood poisoning is triggered by
   a. bacteria
   b. parasites
   c. viruses
   d. toxins
   e. all of the above

3. Seafood poisonings include:
   a. ciguatera
   b. scombroid
   c. tetrodotoxin
   d. all of the above

4. The most effective way to prevent seafood poisoning is to
   a. only eat fish you have caught and cleaned yourself
   b. store fish properly
   c. cook fish thoroughly
   d. eat fish that has a slightly fishy smell

---

**Diving First Aid for Professional Divers**

Chapter 30 Review Questions

1. Marine life injuries can occur as a result of
   a. accidental touching
   b. poor situational awareness
   c. perceived threats to the marine life
   d. all of the above

2. Dive practices that can help minimize the risk of marine life injuries include
   a. buoyancy control and streamlining yourself
   b. use of exposure protection
   c. not touching marine life
   d. poor situational awareness
   e. carrying speared fish
   f. answers a, b and c
